

NETSUITE DELIVERS WITH CLOUD AGILITY

Globalization makes our world smaller every day. With intensely competitive international markets comes an increased pressure to deliver timely service while keeping costs low. Behind the simplistic idea of moving product from point A to B is a complex set of challenges that must be faced head on—inventory management, supply chain visibility, compliance and accounting work flows. To overcome these obstacles, transportation and logistics companies need to be able to process information faster and act immediately on results. Whether you move goods via air, land or sea, NetSuite's cloud-based business management suite enables your business to improve visibility, minimize complexity and remain agile in the face of massive change.

Key Benefits

- Robust global functionality with built-in business intelligence.
- Improved transparency with real-time access to key business data.
- Rapid ROI with speedy implementation and minimal IT overhead.
- Unprecedented development platform flexibility and scalability for growth.
- A cloud-based system that is safe, secure and reliable.

Solution Highlights

- Comprehensive financial and accounting functionality.
- Robust financial controls and regulatory compliance.
- Global business management and consolidation.
- WMS, supply chain and inventory management.
- Real-time reporting and analytics.
- Industry leading customization and integration capabilities.

45-65%

IT cost savings

“We’re looking to grow through acquisitions, and wanted a solution that could grow quickly and dynamically with that growth model.”

– Tim Harrington, VP of IT/CIO, OmniTrax

CUSTOMER SUCCESS

CHALLENGE:

- SAP couldn't accelerate at the pace the business demanded—lacked end-to-end view of operations.

- Previous solution didn't offer the functionality and scalability needed for growth, and required maintenance and troubleshooting by a third-party consultant.

- MYOB lacked the flexibility that TMS needed for growth, with limitations in speed, number of users and customization capability.

SUCCESS:

- Integrated financial, project management and CRM processes across six subsidiaries and transactions in US and Canadian currencies.
- Provisioned NetSuite in minutes to support three acquisitions accomplished over a two-month period, a process that would have taken several months in SAP.
- Empowers workers with anywhere, anytime access to information to expedite daily tasks and find greater process efficiencies.

- NetSuite workflows have cut the processing time between order placement and invoicing in half.
- Cut financial close time from two weeks to five days.
- Real-time, step-by-step insight into shipments, from pickup to delivery through trucking, sea and air transport across the Philippines and internationally through various shipping partners.

- Productivity has soared 75 percent; 23 percent year-over-year revenue growth.
- Gained the agility to broaden its business into outsourced labor/services and international shipping through partners.
- Reduced monthly financial close time from a week to one day.
